

Polycentric Hinged Ulnar Deviation Splint **Application Instructions**

The Polycentric Hinged Ulnar Deviation Splint is designed to straighten the fingers deviating or drifting towards the small finger side of the hand.

Gently contour each finger stay to create a half circle around the base of the finger. Avoid creating sharp curves in the finger stays.

Apply the wrist straps. Use scissors to trim the strap to length.

Splint shown on right hand.

Patented design leaves your palm free to grip items.

The side hinges allow you to freely open and close your hand.
